Instructions for Clipping a Raster to a Polygon Boundary

1. Run ArcGIS.
2. Add data layers (raster layer plus polygon layer).
3. Using the select tool, select the polygon to use as the ‘clipper’.
4. Click the Search tab, enter ‘clip raster’ and click Tools.
5. Select the first tool, Clip (Data Management).
6. Fill in the dialogue box as follows:
   - **Input Raster**: the raster you want to clip
   - **Output Extent**: the polygon layer
   - Check **Use Input Features for Clipping Geometry** (to use the selected boundary)
   - **Output Raster Data set**: Read the options in the Help panel regarding output format.
7. Click OK.
8. Turn off the original layers and zoom to the extent of the new raster.
